

2016 Site Specific Milfoil Report: Asquam Marina

In 2016, our divers spent over 90 hours removing milfoil in Asquam Marina. They removed 224 gallons of milfoil, which is only topped by the 2013 crew who removed 289 gallons from Asquam. Removing milfoil within Asquam is difficult due to the density of other aquatic plants and the patchy growth of the milfoil, which make it difficult for divers to spot milfoil.

Year	Gallons
2012	84.5
2013	289
2014	73
2015	59
2016	224

To learn more or to see a map of milfoil locations on Squam <https://www.squamlakes.org/milfoil-management-squam> or email Rebecca Hanson at rebeccahanson@squamlakes.org.

Our volunteer Weed Watchers are the first line of defense for previously undetected invasive species growth. Once trained, Weed Watchers scan the shoreline and shallow areas in search of suspicious plant growth. Sign up to volunteer as a Weed Watcher by visiting <https://www.squamlakes.org/volunteer/weed-watching-squam-lakes> or email Brian Gagnon at briangagnon@squamlakes.org.
